

ACI and Airport Solutions Ltd Training Courses

I have recently attended the three ACI Operational Safety training courses on Safety Management Systems, Airside Safety and Operations which were presented by staff from Airport Solutions Ltd in a highly professional manner.

The courses were informative, topical and very clearly presented using case studies and practical exercises.

The instructors often used their own experiences from working at different airports around the world.

Anyone who participated in the courses, provided a positive feedback and had a very good exchange of experiences.

At these training sessions, I gained a greater understanding of aviation safety and why is it important. The top priority of our airport is to define safety and our goal is to become the safest airport in Northern Europe by year 2013.

I would not hesitate in recommending Airport Solutions Ltd for providing any Operational and Safety Training as I am sure they will not only learn from the experience, but enjoy it as well.

Sincerely yours,

Dz. Jatniece
Director
Airfield management department
